

## LOC Store Management Suite, Fuel Management Does More Today with Customer Loyalties Integration.

LOC Store Management Suite market studies showed a need for a real integrated retail system with fuel pump interface. To meet this increasing demand, we've added more features to our integrated pump application to maintain our leading edge in the retail market.

The LOC-SMS FUEL MANAGEMENT APPLICATION offers a fully integrated system that will allow management of your fuel transactions to its full potential. You can now control all your pumps from any designated POS. You will be able to authorize all your exterior pumps by the push of a button from one to many registers. The interface will give the user the status of each connected pump. While customers are pumping gas, the screen will reflect the volume bought in real time. The user-friendly LOC-SMS Fuel Management tool screen has the flexibility of programming any LOC-SMS function to the push of a button, making it easy to learn. If you are running a business on a 24-hour shift, the pre-pay function is an important feature that has been integrated to make your life easier.

The LOC-SMS fuel management application will control your Price booking at store level or at central host level using all the standards. LOC-SMS has unique pricing capacity that will allow the operator to drive sales of In-store items. For example: buy \$25.00 of fuel with a coffee and a muffin, get the coffee free. Buy over \$30.00 of fuel; get a special price on all complementary items such as oil, windshield-washing fluid, etc. For more information on our shopper loyalty program, see our Frequent Shopper brochure.

LOC Store Management Suite's Fuel Management application will help you manage your organization according to your specifications. You may decide to have all pumps setup as a self-service or as a full- service. LOC-SMS has the flexibility of letting you choose to set your pumps self served or full-served, at different price ranges. Our user-friendly interface makes the LOC-SMS Fuel Management effortless to switch from one mode to the other giving the flexibility you are looking for.

LOC Store Management Suite lets you manage your gas and your C-Store within one fully integrated solution. Managing different systems can be cumbersome; LOC-SMS lets you control your C-Store inventory and your gas inventory from the same user-friendly interface. Our host package will help you enhance the management of all your sites from one location. Our multi-store feature will give you a friendly interface to easily manage your price bookings and margins by region. Web reporting will allow your regional managers to control his/her region with up-to-date information. Gas and C-Store sales will be update live at head office via the web.

LOC Store Management Suite is a complete solution that can be implemented from the POS system up to your head office. Our integration data, carried out from single gas stations to multiple sites, controlled by a head office, gives us the expertise to assist you in accomplishing a successful integration of this powerful and complete fuel management system.

## THE C-STORE APPLICATION

Managing your in-store product with your gasoline sales is a must. With our extensive C-Store installation, we have been providing the in-store need for more than a decade now; integrating the fuel business was a small step in our inventory management systems. The complete range of LOC-SMS Fuel Management reports will make your life trouble-free. The gas console application will control and keep all data and transactions. A friendly report will validate that your system is matching your pump counter controls.

## SPECIFICATIONS

- Integrated sale reports for gas and store operations
- Reconciliation of your credit/debit cards
- Balancing report to validate counters and POS amounts
- Daily counter reports
- Tank readings in-line with shift changes
- Monthly inventory report for linkage and transactions log
- Transactions log at the gas console
- Office transaction detection
- Pump counters visible at all times
- Car wash management

With the LOC Store Management Suite Host package, you may decide to transfer any data to your head office.

## REPORTS AND BALANCING MODULES

The LOC-SMS fuel pump management tool cashier reports and balancing modules also provide a tight control over all cash in the store. Our priority is to keep your operations integrated in one user-friendly solution to help you control and manage your business smoothly.

## PRICE CHANGE APPLICATION

Pricing can now be managed at the POS level but also from any back office station at your head office. You may also schedule price change to be deployed at any time of day or night. Changing price could affect your margin, hence, we provide you with a full price change report to help you easily visualize and manage your price changes and its effects.

## SPECIFICATIONS

- Gas price change from POS, back office or/and head office
- Scheduled deployment of price changes
- Price change reports

## PAY AT THE PUMP AND PUMP SCREEN ADVERTISING APPLICATION

The advertising display at the pump station may also be controlled by LOC-SMS, giving you plenty of possibilities to interact with your customer directly while he is pumping gas. We supply you with a designer that will help you design your advertising. The Pay at the Pump application will let you control your pay line at the pump just like any other POS. It is designed to let you make sales directly at the pump rather than in the store. Multiple menus can easily be designed to sell fuel, windshield-washer, car washes or Prestone.

## SPECIFICATIONS

- End Of Day and End Of Shift for Pay at the pump
- Dynamic display window directly at the pump
- Easy design application
- Credit and debit card payment options (depending on the controller)
- Fidelity card and programs
- Coupons
- Discount price per customer
- Advertising

## DIAGNOSTIC TOOL

The integrated diagnostic tool will help your petroleum technicians resolve configuration problems. This tool will let you visualize, at a glance, the stability of your system.
